Department of Civil Engineering

CE 588 Numerical Methods in Geotechnical Engineering

Credit and Contact hours	3 / 3 (Lectures), 0 (Tutorials), 0 (Laboratory)
Required, or Elective	Required
Course Description	Numerical versus analytical solution. Approximation and solution of governing differential equations. Basic principles of finite elements, finite difference, and boundary elements methods. Numerical solutions of typical geotechnical engineering problems.
Prerequisites or Co-requisites	None
Course Learning Outcomes	Students completing this course successfully will be able to:

Course Learning Outcomes (CLOs)	*Related Student Outcomes (SO)*
CLO1. Recognize the procedures in which a complex problem of large extent is divided, or discretized, into smaller equivalent units, or components. K1	**SO1**
CLO2. Apply the procedures of discretization into smaller equivalent units, or components to solve complex problems. S1	**SO2**
CLO3. Formulate geotechnical problems as a well posed boundary value problems (boundary and initial conditions, free-surface problems). S1	**SO2**
CLO4. Use in-house and commercial finite difference and finite element codes to provide solutions for complex geotechnical problems and criticized and interpret results. S1	**SO2**
CLO5. Apply fundamentals of soil mechanics and numerical methods to provide solutions to geotechnical problems and understand the limitations. S1	**SO2**
CLO6. Demonstrate professional engineering and ethical values in assigned projects and assignments, with high academic integrity. V2	**SO7**

Student Outcomes related to this Course

SO 1 Recognize advanced engineering knowledge, concepts, and techniques to identify, interpret, and analyze complex and real-life engineering problems.

SO 2 Provide solutions for complex and real-life engineering problems through critical thinking and the use of modern engineering tools, and identify their impact on social, global, cultural, environmental, safety, and economic factors.

SO 7 Effectively manage, individually or in groups, specialized tasks and activities in coursework, projects, assignments, and research work with a high level of autonomy and responsibility.

<tr><td>Topics Covered</td><td>
<table>
<tr><th>List of Topics</th><th>Related CLOs</th></tr>
<tr><td>1. Introduction</td><td>CLO 1,2</td></tr>
<tr><td>2. Analytical versus numerical solutions</td><td>CLO 2,3</td></tr>
<tr><td>3. Historical background</td><td>CLO 1</td></tr>
<tr><td>4. Overview of analytical solutions for typical problems in geotechnical engineering.</td><td>CLO 1,3</td></tr>
<tr><td>5. Overview of numerical methods and identification of methods commonly applied in geotechnical engineering.</td><td>CLO 3</td></tr>
<tr><td>6. Basic idea of initial, boundary, and Eigenvalue problems; Dirichlet versus Newmann boundary conditions, primary versus secondary variables</td><td>CLO 3,4</td></tr>
<tr><td>7. Principle of the finite difference method, the basic idea and basic features</td><td>CLO 3</td></tr>
<tr><td>8. Finite difference solution of elliptic differential equations - application two-dimensional seepage problem.</td><td>CLO 3,5</td></tr>
<tr><td>9. Finite difference solution of parabolic differential equations - application to Terzaghi’s one-dimensional consolidation</td><td>CLO 3,5</td></tr>
<tr><td>10. Basic principles and concept of finite element method.</td><td>CLO 1,5</td></tr>
<tr><td>11. Discretization and displacement approximation</td><td>CLO 5,6</td></tr>
<tr><td>12. Elements and global equations</td><td>CLO 1,4</td></tr>
<tr><td>13. Shape functions for one- and two-dimensional elements, isoparametric elements (Triangle, quadrilateral)</td><td>CLO 1,6</td></tr>
<tr><td>14. Assembly, integration and implementation.</td><td>CLO 1,5</td></tr>
<tr><td>15. Two-dimensional plane strain and axisymmetric idealization.</td><td>CLO 5</td></tr>
<tr><td>16. Drained, undrained and coupled analysis, modeling of construction and excavation</td><td>CLO 6</td></tr>
<tr><td>17. Overview of boundary element method, formulation, BEM for plane elasticity</td><td>CLO 5,6</td></tr>
